## Technical Data

Front Dimensions mm	96 x 48
Type	PFN 96 x 48 M
Scale Length mm	65
Class	1.5
Weight approx. (kg)	0.5
for auxiliary voltage 20 ... 40 V AC / DC	0.2
Sampling	electronic
Relative Switching Speed (max. error as related to scale length)	1 %
Repetition Accuracy (at nom. aux. voltage and 23 °C)	0.1 %
Number of Limits	4
Min. Contact Limit Clearance (of scale length)	3 %
Output Relay	built in
Output Contact	1 changeover per limit
Switching Capacity with Ohmic Load	
Max. Switching Voltage	300 V AC / DC
Max. Switching Current	6 A AC/DC
Nominal Switching Capacity	≤ 1500 VA
Service Life at Nominal Switching Capacity	> 10 <sup>6</sup> switching cycles
Max. Switching Time	500 ms
Auxiliary Voltage (U <sub>H</sub> )	see order information
Power Consumption, AC Aux. Voltage	4 VA
Power Consumption, DC Aux. Voltage	4.5 W
Safety Regulations per	
IEC/EN 61010-1/A2 VDE 0411-1/A1	
Safety Class	II (total insulation)
Measuring Circuit:	
Over voltage Category	CAT III
Pollution Degree	2
Operating Voltage	300 V
Operating Voltage for Voltage Measuring > 250 V ... ≤ 600 V	600 V
Test Voltage (to Housing)	5.8 kV
Front Panel-Housing Protection	IP 52
Fasteners	screw spindle

## Internal Resistance / Voltage Drop / Power Consumption

(Values only apply with zero point at left or at bottom)

## Reference Conditions

Reference Quantities	Reference Conditions
Ambient Temperature Position of Use Other	23 °C ± 2 °C control panel vertical ± 1 ° DIN EN 60 051

## Description

Analog indicator/controller with moving-coil movement for direct current or direct voltage

## Display

Scale Division	Coarse-fine
Pointer	Beam pointer with knife-edge for single and double division

## Mechanical Design

Housing Material	Polycarbonate, self-extinguishing and drip-proof per UL 94 V-O
Replaceable	Glass windows and front frames ⇒ May only be replaced under voltage-free conditions!
Terminals	tab connectors (IP 20 protection) 1x 6.3 x 0.8 mm or 2 x 2.8 x 0.8 mm

## Ordering Example:

Indicator/Controller 96 x 48 mm for direct voltage, landscape scale,  
Measuring range 0 ... 100 V, direct voltage,  
Closed-circuit current model, contacting Min.-Max. /Min.-Max.

# Vario-Series • Rectangular Indicator/Controllers

For Direct Current or Direct Voltage with 4 Limit Contacts

## General Issues

Indicator/controllers are meters with adjustable limits.

The accuracy of the limits are not influenced by the contacts.

Our meters and indicator/controllers comply with the regulations of the European Guidelines 73/23/EWG. This is proven by the compliance with the following standards:

IEC 61010-1/A2 / EN 61010-1/A2 VDE 0411-1/A1 (Safety Regulations)

IEC 60051/EN 60051/DIN EN 60051 (Meters with Scale Display)

EN 50081-2: 1993 EMV (Emitted Interference, Industries)

EN 50082-2: 1995 EMV (Emitted Interference, Industries)

To protect the movable part of the indicator/controller against shocks, the bearings are spring mounted.

## Application

Indicator/controllers display the actual value and energise with the help of one or more limits one or more relays. Their contacts can be used for monitoring, operating or controlling.

Indicator/controllers are also available with logic output (transistor output).

## Sampling

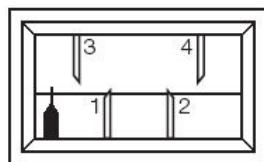

The sampling of the indicator/controllers works contact-free.

When the pointer reaches the limit the switching operation will be disengaged.

## Contacting

The max. contact disengages the switching operation when it overshoots the adjusted scale value. The min. contact disengages the switching operation when it undershoots the adjusted scale value.

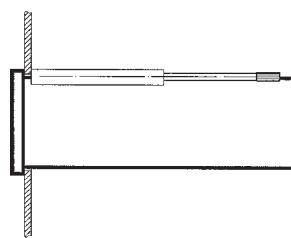

## Position of Limits

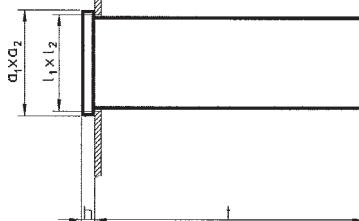

## Fasteners

Screw spindle

(control panel thickness 1 ... 40 mm)

## Basic Dimensions

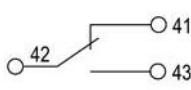

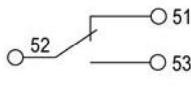

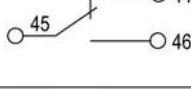

All indicators/controllers cause a permanent contact. This means that the output signal is held up as long as the pointer does not overrun the adjusted limit. The indicators/controllers are available as closed-circuit current model or working current model (see different Order No.).

**Closed-Circuit Current Model:** When the indicator/controller is not-operated a voltage is impressed on the relays (output signal H, logic output). The voltage drops as soon as one of the contact marks is undershot or overshot. The same happens when a power breakdown or an electronic breakdown occurs and no limit is overshot or undershot (self supervision). A short-term power failure leads to the same effect.

**Working Current Model:** When the indicator/controller is not-operated the relays are in zero current condition (output signal L, logic output). As soon as one of the limits is overshot or undershot the relays pick up (output signal H).
